Sustainable. Reliable. Affordable

A Message from Our CEO, Rob Baron

At Marcal, we are proud to continue leading the way in sustainable paper products, and I remain just as excited today about our new Structured Sheet Technology as I was when we first introduced it. With a 41% reduction in greenhouse gases, this innovation is truly making a difference. It allows us to deliver high-quality, absorbent towels while using less fiber, which means fewer natural resources consumed and more responsible production methods.

Sustainability has always been at the core of who we are. By utilizing 100% recycled fiber in many of our products, it allows us to deliver high-quality absorbent towels using less energy, which means fewer natural resources consumed. Our goal is to continue providing eco-friendly solutions that meet the needs of businesses and consumers alike, without sacrificing quality or performance.

Whether you're stocking our recycled paper towels or exploring our modern dispenser solutions, we remain committed to delivering products that contribute to a cleaner, greener future. Thank you for your continued trust in Marcal as we grow and evolve with sustainability always in mind.

Sincerely,
Rob Baron
CEO, Marcal Paper

Environmental Leadership

Marcal has been committed to environmental sustainability since the 1950s, well ahead of the curve. Early on, we understood the critical importance of preserving our planet for both current and future generations. Our mission is to create high-quality paper products while reducing our ecological footprint to promote a healthier planet.

Eco-Friendly Products

We proudly provide a wide range of eco-friendly paper solutions, including recycled towels, tissues, and napkins. Made from recycled materials, these products minimize the demand for virgin resources and reduce waste, supporting a sustainable future.

Reduced Carbon Footprint

Our manufacturing processes are optimized for energy efficiency, and we continually strive to lower our greenhouse gas emissions through advanced technology.

Waste Reduction

At every level of operation, we are focused on waste reduction. From production to distribution and packaging, we are working toward a zero-waste goal, ensuring that we minimize waste wherever possible.

Structured Sheet Technology

Our innovative Structured Sheet Technology reduces greenhouse gas emissions by 41% compared to traditional premium TAD paper products, making a significant impact in reducing our environmental footprint.

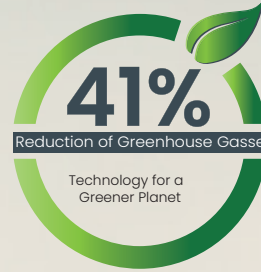

What To Look For

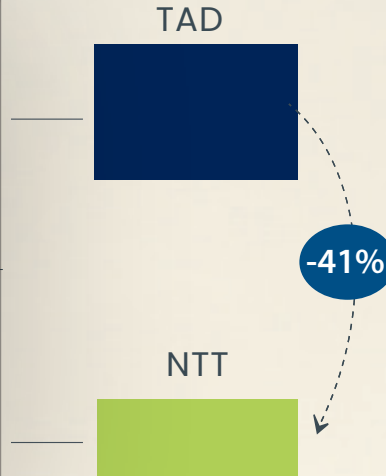

When you spot the following graphics on your products or cartons, you can be confident you're making a smart, eco-conscious choice. To reinforce our commitment, we've undergone rigorous audits to ensure we are making every effort to have a positive impact on the planet.

Visit www.marcalpaper.com to learn more.

Technology for a Greener Future.

	Papermaking Process	Emissions Efficiency
TAD	The TAD process uses a textured fabric and a Through Air Drying method to produce a paper product	Requires more energy for drying than other papermaking processes. Which may contribute to higher GHG emissions/energy use.
NTT	The NTT process uses a textured belt and a shoe press to create a higher density web, removing water from the sheet	Typically produces lower air/GHG emissions because it uses less energy compared to traditional papermaking processes

*Compared to Through-Air Drying (TAD) technology through independent audit. For details please see www.marcalpaper.com/sustainability.

Working to build a bright future for people, communities, and the planet by accelerating the adoption of products that are safer and more sustainable.
