

ECO BRILLIANCE PAD SYSTEM -  
FOR THE PERFECT RESULT

# FLOOR RENOVATION IN 4 STEPS

## RENOVATE YOUR FLOORS DURING DAILY CLEANING AND SAVE COST

With the Nilfisk Eco Brilliance pad system you can renovate your floor during daily cleaning. Use 4 pads in 4 steps to achieve a clean and shiny floor. The 4 steps have to be repeated in the same way and correct order to achieve perfect results.

Using the Nilfisk Eco Brilliance pad system to renovate your floor during daily cleaning will save costs and reduce the downtime of the surface. The 4 pad system can also be used to intensively renovate floors but this will increase the downtime of the surface.

Before renovating a floor consider the daily traffic in the area. If daily traffic is high you consider how shiny the floor needs to be, as higher shine floors require extra maintenance.

## BETTER RESULTS

The Nilfisk Eco Brilliance pad not only saves time, but is environmentally friendly and gives a better result compared to traditional pads. The method was developed for soft stone or concrete floors, but it also gives an excellent result on other floor types, such as plastic and linoleum and polished surfaces. It is best-suited to shops, foyers and other heavy traffic which require not just cleanliness, but also a shiny, attractive surface.

## THE ENVIRONMENT AND RESULT

The combination of pads and clean water give perfect cleaning results and minimise residues. In heavily soiled areas or production zones, detergent can be added if required. Almost all Nilfisk scrubber dryers can be fitted with the Ecoflex dosing system for non-chemical cleaning, allowing the addition of detergent as required.

- Renovates old and worn floors and restores shine.
- Brings floor restoration to a more economical level.
- Simple system for renovating floors during daily cleaning.
- Buffs floors to the desired shine.

## HOW TO GET CLEAN SHINY FLOORS

To get clean shiny floors the 4 different pads should be used in 4 steps renovating your floors. Starting with the step 1 red pad it needs to pass the same surface between 6 to 10 times depending on the floor condition before moving to the next step. All steps need to be done with water and the water needs to be removed between every step. For renovating large areas a scrubber drier is recommended but if the surface is smaller a single disc together with a wet vac can do the job fast and easy. This is also a fast way to make a demonstration on a small surface to confirm which result can be achieved.

## NEED A HIGH GLOSS?

If a high gloss floor is preferred the step 4 green pad can be used dry with a burnisher or high speed single disc machine with 300-2000 rpm. This will give an easy to clean surface with very high shine. To preserve this level daily maintenance may need to be increased depending on daily traffic.

## ECO BRILLIANCE PADS RANGE

<p><b>STEP 1 - COARSE - RED</b> Use the red pad to remove old and worn surfaces, leaving a clean matt finish.</p>		<p><b>STEP 3 - FINE - YELLOW</b> Use yellow pad for daily cleaning which removes dirt and scratches, leaving a satin surface which is easy to keep clean. The renovation can stop here but continue to use the yellow pad in the daily cleaning to preserve this condition of the floor.</p>	
<p><b>STEP 2 - MEDIUM - BLUE</b> Use the blue pad to prepare the surface still leaving a clean but less matt finish.</p>		<p><b>STEP 4 - VERY FINE - GREEN</b> Use the green pad for daily cleaning which removes dirt and scratches, leaving a shiny surface. For high gloss the green pad can be used dry on a high speed burnisher or a high speed single disc machine depending on floor type. This high shine can require extra work to be maintained if the daily traffic of the area is high.</p>
