HARD WORK MADE EASY

Compact, maneuverable and powerful. More comfortable than ever – the multifunctional vacuum sweeper MC 150 makes city centre cleaning and performing many other tasks back- and user-friendly thanks to the active hydro-pneumatic suspension system.

COMPACT. HIGH PER FORMANCE.

Easy to maneuver and suitable for pavements: the machine is ideal for use in city centres. And it is large enough to carry a second worker.

Kärcher vacuum sweepers have been tried and tested over thousands of operating hours. The MC 150 also boasts excellent cleaning results and high ride comfort.

The machine is ahead of the game in terms of driving and sweeping efficiency – the powerful 48 kW engines impress with high fuel efficiency and low emissions.

Passenger vehicle driving licence is sufficient

The permissible total weight of 3.5 tonnes has two key advantages in most European countries. It means that the machine can be used on pavements and that a class B driving licence is sufficient.

Easy to steer round corners

Extremely narrow and extremely manoeuvrable: the articulated steering combined with compact dimensions provides optimum freedom of movement with 100% directional stability – for precise manoeuvring in very tight spaces.

High traction thanks to all-wheel drive

The permanent hydraulic all-wheel drive with traction control and the optional differential lock ensure safety. The machine also features an automatic parking brake for all four wheels and a powerful braking system.

COMFORTABLE WORK PLACE

Climb in, get comfy and off you go – the Kärcher vacuum sweeper offers a high level of comfort on a par with a passenger vehicle thanks to its generous, comfortable cab for up to two people.

Take on the city with two joysticks

The MC 150 is controlled with modern operating technology. Press one button to move it into the working position and another to start sweeping. The functions can also be adjusted manually – a feature present in the larger machine classes.

Multifunctional display in the steering wheel

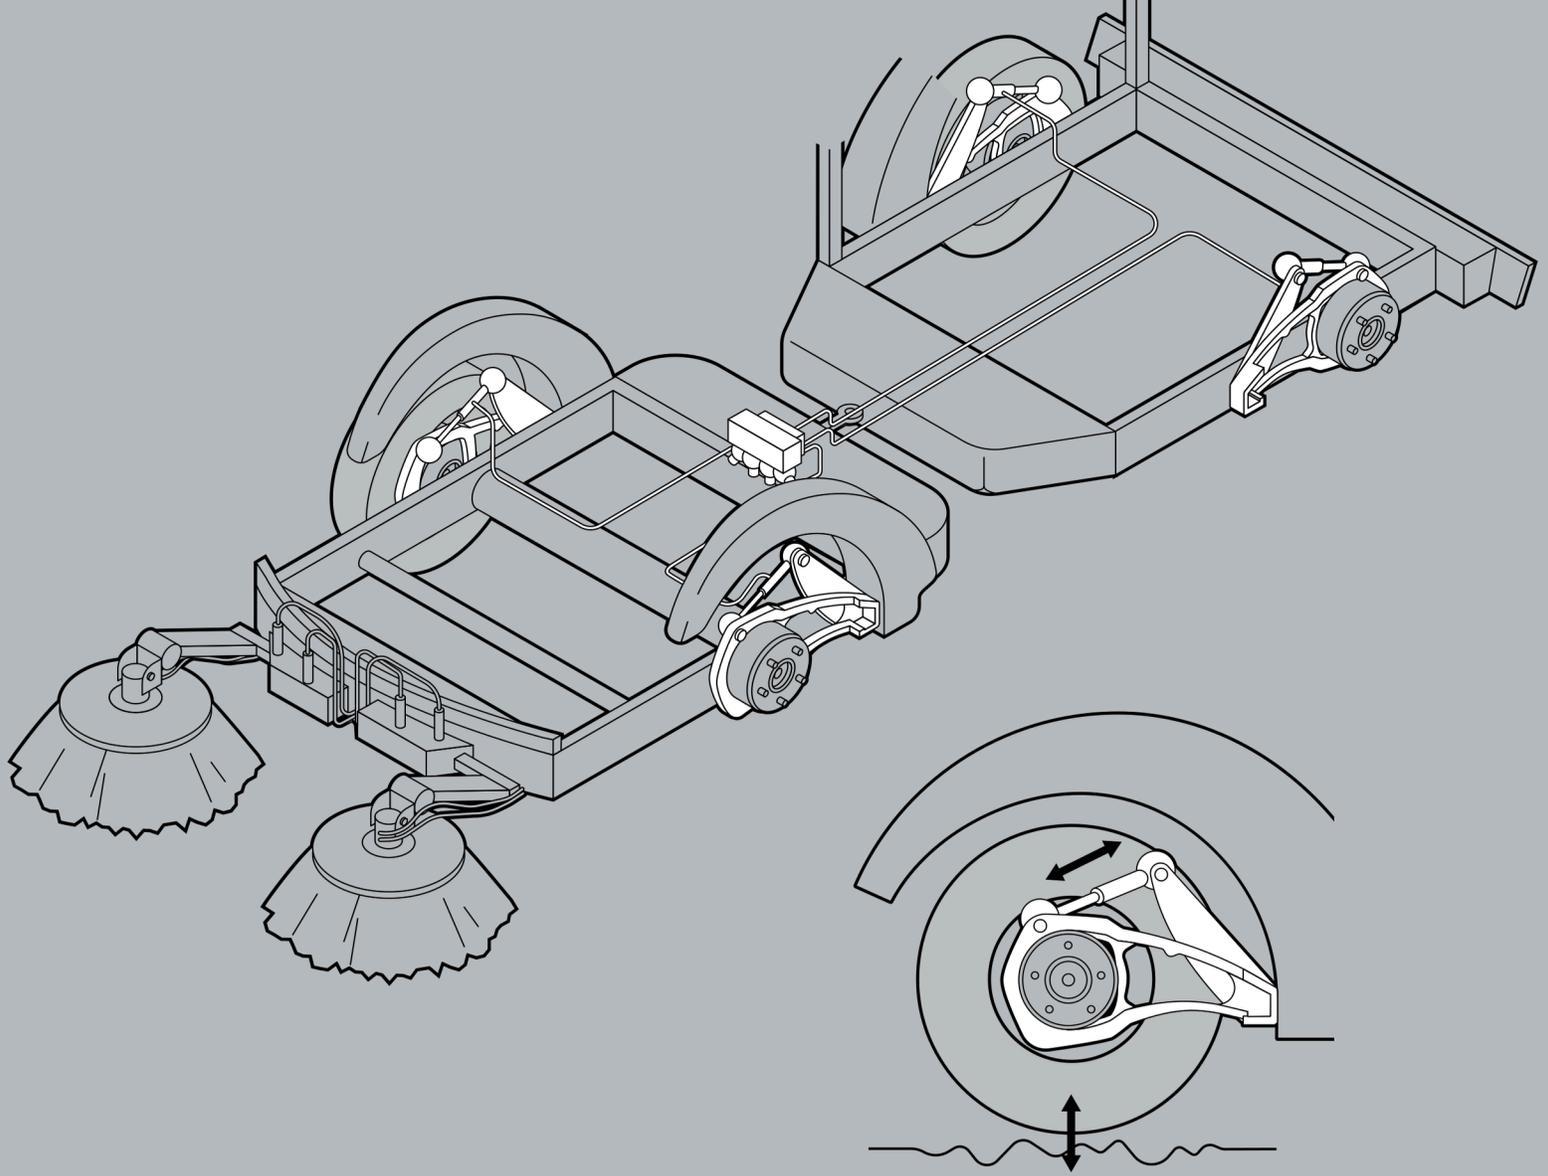

Keep an eye on all important data at a glance – the multifunctional display assists the driver during all the demanding precision work involved in sweeping. Its position in the steering wheel enables the driver to fully concentrate on the work environment.

A 360° view

The cab, which is tilted towards the front, provides the driver with an optimum view of the work environment and the outer edge of the implements. The heated windscreen, which comes as standard, guarantees perfect vision at any time.

Power can also be quiet

A loud machine is a problem in the long run – which also affects pedestrians in the immediate vicinity. The operating noise of the MC 150 is pleasantly quiet both inside and out, which means that municipalities can even be swept during the night and early in the morning.

ACTIVE SUSPENSION

Thanks to its active hydropneumatic suspension, the MC 150 is the only machine in its class to offer a high level of suspension comfort – in any load condition.

Unlike mechanical systems, the new active hydropneumatic suspension has one key advantage – it actively responds to different load conditions. This is what provides the added comfort for users under tough everyday working conditions.

This is because the machine drives and behaves just as comfortably in the mornings when it is not loaded as it does shortly before the end of the working day, for example after the maximum quantity of waste has been collected.

High stability in every situation

The active suspension has many benefits. In addition to the load-independent behaviour, the hydropneumatic system also increases driving stability when driving round corners and keeps the machine upright.

More than comfort – a healthy working environment

We have given our all to make things as comfortable as possible for the drivers. The dynamic four-point cab suspension together with the new active hydro-pneumatic suspension provide high ride comfort with minimum vibrations. It is also for this reason that the independent association “Aktion Gesunder Rücken e. V.” (AGR) – the Campaign for Healthier Backs – has awarded the machine its seal of approval for ergonomics.

The benefits for you at a glance:

- The active hydropneumatic suspension system automatically adapts to changes in weight
- For maximum driving comfort, the chassis is raised at high speeds
- The individual control system on each individual suspension cylinder always provides the perfect balance
- Awarded the “Aktion Gesunder Rücken e. V.” seal of approval.

CLEANING PROFESSIONAL

Fitted with a two- or three-brush system, the multifunctional vacuum sweeper also guarantees optimum results for demanding cleaning tasks. This is down to features such as individual brush control, individual brush relief, the automatic coarse dirt flap and the hydraulic angle adjustment.

MORE THAN SIMPLY SWEEPING

The MC 150 can also be used as a multi-functional implement carrier. See more information on page 16 onwards.

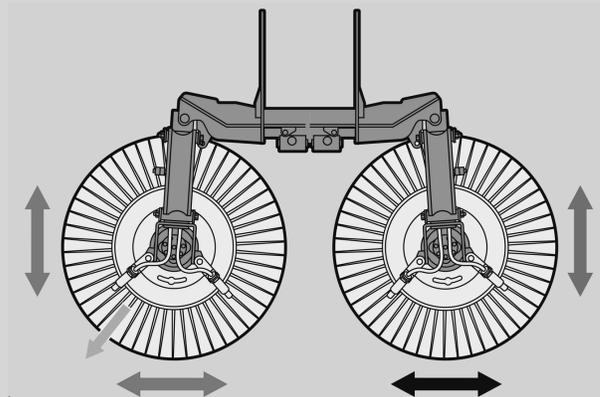

MC 150 WITH TWO BRUSH SYSTEM

The sliding two-brush system has individual brush control for independent control of the brush arms. The unique parallelogram guide ensures even wear of the brushes and therefore a longer service life.

Highlights and specifications:

- Sweeping width up to 96"
- Maximum brush range
- Water spraying reduces dust dispersal
- Separately controlled brush relief and speed
- Angle adjustment to adjust the right or left side brush (option)
- Maximum start-up protection

-  Individual brush control
-  Brush relief right/left
-  Brush angle adjustment (option)
- 

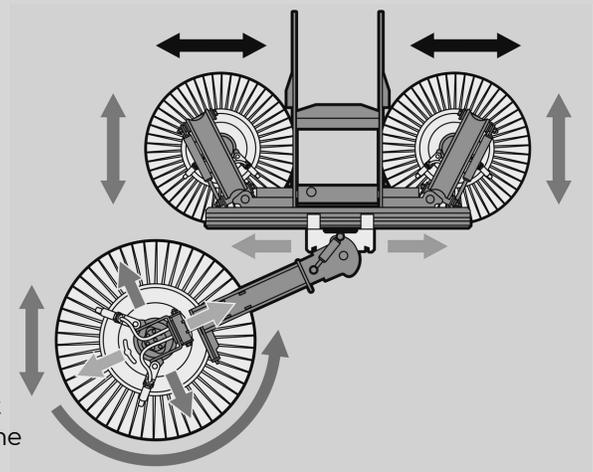

MC 150 WITH THREE BRUSH SYSTEM

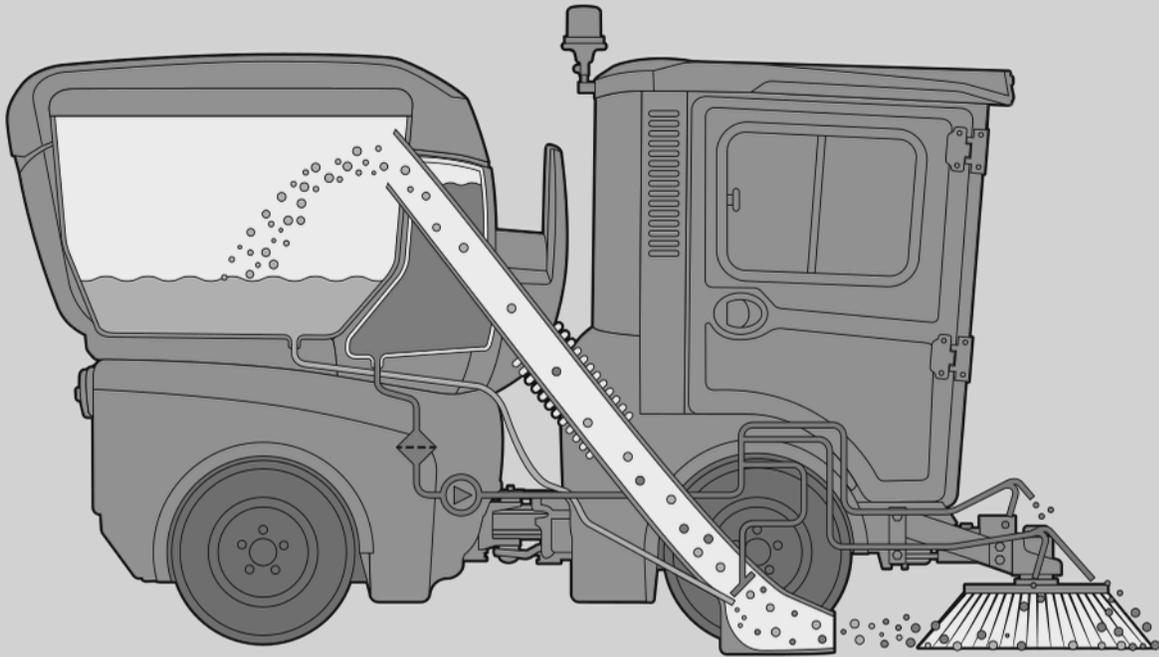

The three-brush system enables flexible work with a sweeping width of up to 105" – that means, for example, that you can clean the full width of a cycle path in one go. The particular strengths of this system, which is optimised for city centres, include sweeping niches and working at different levels.

Highlights and specifications:

- Sweeping width up to 105"
- Possible to work at two levels
- Possible to work over large areas thanks to lateral displacement
- Distance between the brush and the machine is always the same
- Sweeping direction can be changed from the cab
- Sweeping surface can be adjusted easily
- Weed brush

- ➔ Sweeping width adjustment
- ➔ Individual speed adjustment
- ➔ Brush relief
- ➔ Brush angle adjustment
- ➔ Pitching
- ➔ Side shift

CLEAN SYSTEMATICALLY

Save money and protect the environment – the efficient suction system with a water circulation system keeps water consumption low.

Like all Kärcher vacuum sweepers, the MC 150 also uses a powerful vacuum system as standard that Kärcher has developed using complex CFD flow simulations.

With the water circulation system, the dust is bound even more efficiently, with significantly lower water consumption and longer operating times. This makes work efficient and environmentally friendly.

Save time and water

The water circulation system reduces the fresh water requirement considerably. This means longer work intervals, which increases efficiency and productivity.

Clever filling and emptying

The large waste container 396.258 l comes with a water circulation screen. The easily accessible exhaust air screen simplifies cleaning. It is also possible to manually fill it with bulky dirt. Dirty water can be drained off separately.

Powerful but quiet vacuuming

The entire suction fan is aerodynamically optimised – from the pick-up head to the suction hose right through to the container. This is how it achieves maximum suction power, works quietly and saves fuel even at low engine speeds.

Easily remove blockages

With one simple procedure – Kärcher is the only manufacturer to provide a removable suction hose. This enables a blockage, which cannot be completely ruled out on vacuum sweepers, to be removed quickly and easily.

TACKLES EVERY THING, ANY WHERE

The MC 150 is also an implement carrier and therefore is ready for anything, every day of the year. Three implement interfaces and powerful hydraulic drives make it possible to use the machine anywhere – for applications such as watering, mowing or for winter service.

WN AK 818

A REAL ALL ROUNDER

Powerful performance – the robust front lift can move and carry heavy implements. This makes it suitable for applications such as winter service with a snow thrower and spreader.

The large lifting force and payload of the front lift make the machine an enthusiastic powerhouse. The high-performance hydraulic system transfers the engine power extremely effectively.

Implement carrier highlights :

- Efficient year-round use
- Several separate hydraulic circuits for controlling several implements
- Implements with a high power consumption, such as a flail mower or snow thrower, can be used effortlessly
- Free selection of implements thanks to standardised three-point support CAT 0 and CAT 1

High flexibility

Three implement interfaces at the front, rear and above the engine enable a wide range of applications, such as watering or washing with a large water tank.

A robust investment

The stable frame is designed to carry heavy loads for long periods of time and can be used without restrictions, even in winter service, thanks to its high-quality corrosion protection. The front and rear axle load of 4,409.245 LBS enables you to attach heavy implements all year round, even on the front of the vehicle.

One container, multiple uses

The 396.25 gal container can be used for a number of applications, from sweeping to cleaning floors using a scrubbing deck and the maintenance of green areas. This saves on time spent changing the container and improves efficiency.

High pressure on board

A Kärcher high-pressure cleaner can be optionally integrated ex works so that users can also clean park benches, traffic signs or the machines themselves.

MAINTENANCE AND CLEANING

During development, we have made sure that maintenance and cleaning are as easy for you as possible. This ensures that cleaning and maintenance tasks are fun and are carried out regularly. The result is a longer machine service life and the best results in the long term.

Simple cleaning

The well-thought-out design of the MC 150 enables simple and fast cleaning, which leaves more time for important matters. Unpleasant dirt accumulation in the waste container is a thing of the past, while regular cleaning increases the service life of the components.

Rapid maintenance

Swivelling engine covers make servicing extremely simple. They provide access to all maintenance-relevant components and the engine. Maintenance tasks are made easier through central lubrication points, easy monitoring of hydraulic fluid and simple air filter changes. This saves time, money and hassle.

UPGRADE NOW!

Decide on the MC 150 now and benefit from the unique advantages of the tried and tested machine concept.

Multifunctional vacuum sweeper MC 150

Technical highlights

- Two-step traction drive
- Permanent all-wheel drive
- Two-person cab with heated windscreen
- Integrated hydraulic tilting frame
- Spring-mechanism parking brake on all four wheels

Drive/engine	Four-cylinder common rail engine with DPF/Kubota
Power	66 HP
Driving speed	25 mph
Climbing ability	30 %
Turning radius (inner)	48"
Minimum dimensions (L × W × H)	134" × 48" × 78" (implement carrier without front lift) 149" × 48" × 78" (sweeper with 2-brush system)
Permissible total weight	7,716 lb
Towing capacity (braked)	6,614 lb
Unladen weight	4,519 lb
Container capacity	1.96 cu. yd.
Fresh water tank	52 gal
Working width	96" / 105"

365 DAYS A YEAR

The implements on the machine can be changed easily and quickly. This makes work easier and increases efficiency and productivity.

Three implement interfaces mean the implement carrier can be used anywhere. The front lifting system is compatible with implements in the CAT 0, CAT 1 and CAT 1N categories from a wide range of manufacturers. One person can easily swap the attached implements, such as a brush system, using supporting stands.

Quick-change system for easy implement swapping – the integrated quick-change system lifts and lowers implements hydraulically. No more hand spindles which have to be adjusted by hand one after the other.

WHAT IF THE FUTURE CHANGES TOMORROW?

No matter how radically your tasks change, we can help you to keep up with the challenges ahead. Just reach out to us to reach for the stars.

SERVICES THAT WE CAN BE PROUD OF

Maintenance & Repair – Expert Care You Can Count On

Americhem's certified technicians deliver fast, professional service for all mechanical, electrical, and hydraulic needs. With ongoing training and deep product knowledge, we ensure every repair or maintenance task on your Kärcher or Holder equipment is done right—the first time.

Complete Overhaul & Air Conditioning Service – Restoring Performance, Inside and Out

Whether your Kärcher or Holder vehicle needs a full reconditioning or repair after an accident, Americhem has you covered. Our technicians handle complete overhauls with precision and care, bringing your equipment back to peak condition.

We also offer expert cleaning, maintenance, and repair for your air conditioning system—ensuring reliable performance, longer lifespan, and a cooler ride, no matter the temperature.

Official Inspections – Stay Compliant and Confident

Americhem handles official inspections for your Kärcher or Holder equipment, including main and safety inspections in accordance with accident prevention regulations (UVV). Schedule an appointment with our service team to ensure your machines stay compliant, safe, and ready for the job.

On-Site Service – We Bring the Workshop to You

Americhem's trained technicians come directly to your location with fully equipped service vehicles, ready to handle diagnostics, maintenance, and repairs on-site. And when winter hits, our 24/7 on-call service ensures you're never left out in the cold.

Pickup & Delivery – Hassle-Free Transport, Start to Finish

Need service or repairs? Americhem can pick up your Kärcher or Holder equipment and return it once the work is done. We can also coordinate shipping through a trusted carrier—so you don't have to lift a finger.

Extended Warranty – Extra Peace of Mind

Protect your investment with an extended warranty—available for up to 36 months. Talk to us to find the right coverage for your equipment.

**THE RIGHT
MACHINE AT THE
RIGHT TIME**

Americhem + Kärcher Municipal – The Complete Vehicle Lineup
From high-performance sweepers to versatile implement carriers, we offer the full range of Kärcher Municipal vehicles—ready to tackle any task, any season.
