

Filling instructions for Chem-Ready Bucket

1. Read and follow any precautions recommended by your chemical manufacturer and check chemical compatibility with the Chem-Ready Wiping Roll.
2. Place one Chem-Ready Wiping Roll into a clean, empty bucket.
3. Pour approximately 32 ounces* of your preferred FDA or EPA approved sanitizer/disinfectant or water-based cleaning solution over the roll in the bucket.
*Use enough chemical to reach full saturation.
4. Complete the OSHA chemical transfer label printed on the bucket or apply your own label.
5. Start the wipe from the center of the roll and feed through lid opening.
6. Securely snap the lid on the bucket and pull wipe to dispense.
7. Bucket reuse: Inspect bucket and replace if unacceptable for reuse. If acceptable for reuse, clean external surfaces of the bucket and refill only with the same chemical as indicated on the bucket label. Then follow steps above.

Always consult with your chemical provider for guidance on proper chemical loading and product use. Use cleaning chemicals in accordance with your chemical manufacturer's instructions and local chemical regulatory requirements.
